---

## SUMMARY

I am a passionate and creative technology enthusiast with skills in C, C++, Python, HTML, and Artificial Intelligence (AI). I am also skilled in Microsoft Office applications, including Excel, Word, and PowerPoint, along with Graphic Design. I enjoy learning new technologies, solving problems, and exploring innovative ideas. I love playing video games and have a strong interest in technology, creativity, and continuous learning.

## PROJECTS

### Smart Stick for Blind People

- The Smart Stick for Blind People is an innovative and helpful project that improves the quality of life of visually impaired individuals. By using sensors and microcontroller technology, the smart stick provides real-time obstacle detection and alerts, making navigation safer and easier.

### Mini Refrigerator with Vending Machine

- The Mini Refrigerator with Vending Machine project is important because it helps thirsty people during the hot summer season. In summer, people often need cold drinking water, especially in public places. This project provides chilled water easily through a vending system, so people can buy water anytime without human help.

### Jarvis AI – Intelligent AI Assistant

- Jarvis AI is an intelligent personal virtual assistant developed using Python, HTML, CSS, and JavaScript. It can understand voice commands and perform various tasks, such as opening applications, accessing websites, setting alarms, and providing AI-powered responses. It is designed to make computer usage easier, faster, and smarter through voice interaction.
